OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous

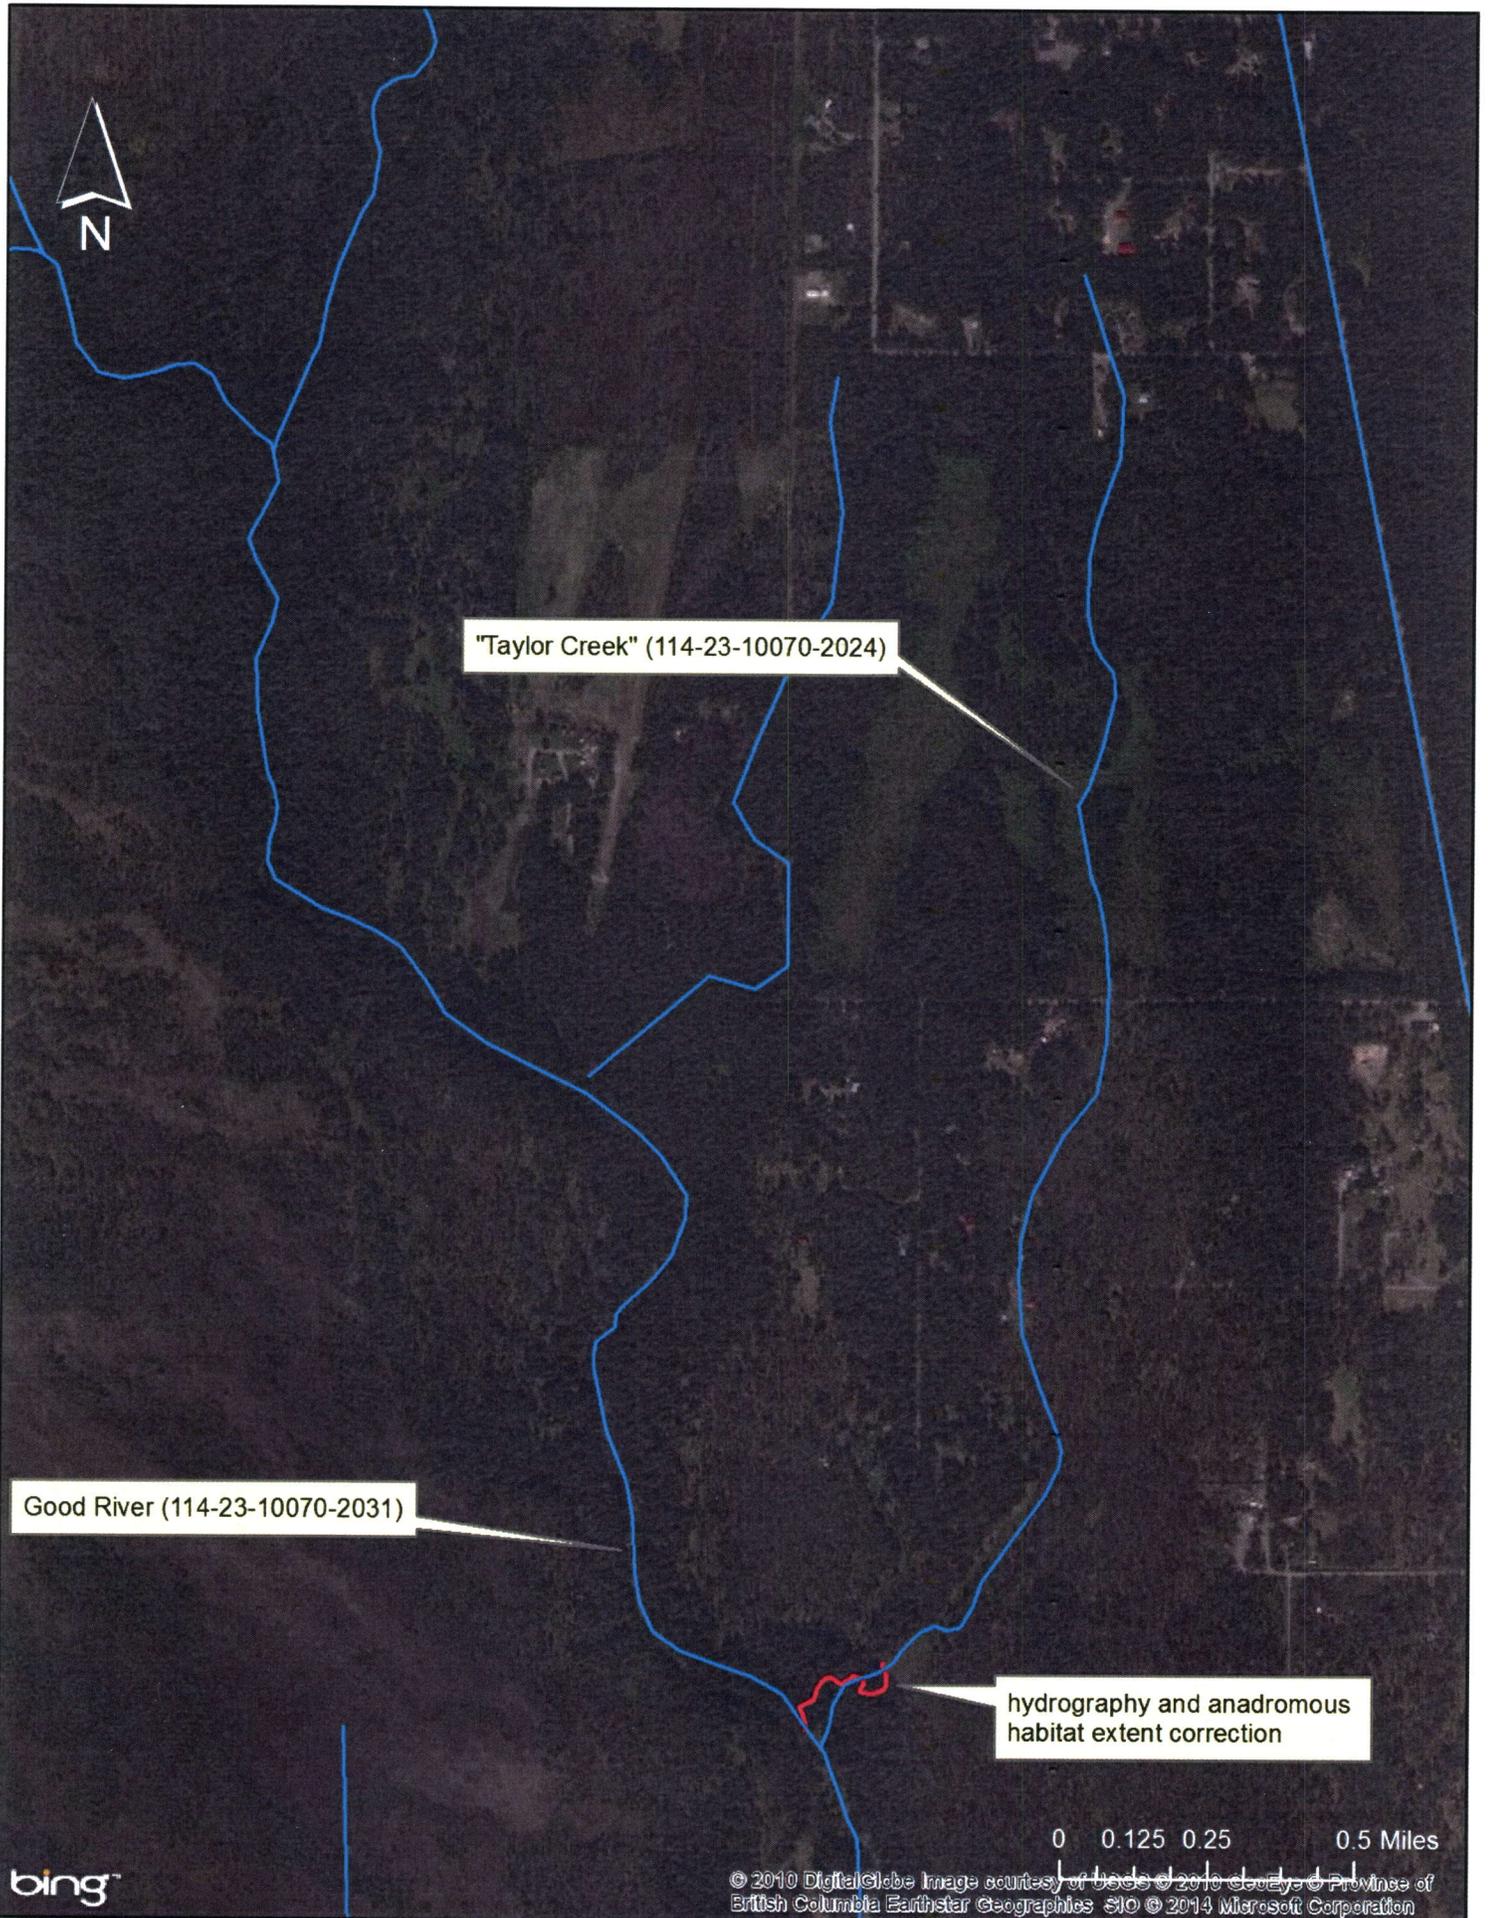

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:
 This nomination deletes most of a cataloged stream that does not exist and corrects the hydrography of a short reach of the the stream that supports anadromous fish (see map). In July of 2011, John Hudson collected two juvenile coho salmon (100 mm long) at the upper extent of the corrected anadromous stream channel which is shown in red on the attached map. There is a 24 inch high waterfall (headcut) that defines the upper extent of anadromous waters in this tributary to the Good River.
