Additional Comments: This information was collected as part of ADF&G's Fish Passage Assessment project. This nomination supports that addition of a previous unmapped stream that flows directly into Coffman Cove. This nomination also supports the addition of dolly varden present and rearing to that stream. 100' upstream of inlet, stream enters old growth. Habitat is good, deep pools and glides, stream cuts wide meanders. Downstream is thick second growth. Evidence of old beaver activity, banks are eroding and unstable silt/organics.
