Observation Information

Life History:

Species\LifeStage: Dolly Varden juvenile/adult Sampling Method (No. of fish): A (4)  
 Species\LifeStage: cutthroat trout juvenile/adult Sampling Method (No. of fish): B (1)

Key To Sample Events

Sample ID: (A) Sample Gear: Minnow Trap  
 Sample ID: (B) Sample Gear: Minnow Trap

CT and DV anadromy unknown

**Additional Comments:** This information was collected as part of the ADF&G Fish Passage Project. This nomination supports the addition for presence of dolly varden char and cutthroat trout in a small uncatalogued stream that drains to Coffman Cove on Prince of Wales island. Stream drains directly to ocean without any other downstream tributaries. Upstream appears to be controlled by a layer of hardpan clay studded with marine clam shells. Little wood, few pools. Mostly aggraded riffles upstream with little OHW variability. Downstream 100' stream becomes bedrock controlled. First 200' upstream may have been used to yard/flume logs. Cutthroat trout and dolly varden char trapped.. Large gradient barrier of about 4 feet about 400 feet upstream.
