Additional Comments: This information was collected as part of the ADF&G Fish Passage Project. This nomination supports the addition for presence of dolly varden char and cutthroat trout in a small uncatalogued tributary of 106-30-10670-2004-3021 on Prince of Wales Island. Stream is ditched along the road U/S but has had some wood added to it. Stream enters old growth 120' upstream and above this point more gravel and wood is present and appears to be excellent habitat. Downstream the channel is sandwiched between old and new road grades and is likely artificial. Sediment of embedded culvert scoured at inlet. Culvert is embedded for most of length, but not fully technically embedded at the inlet.
