Additional Comments: This information was collected as part of ADF&G's Fish Passage Assessment project. This nomination supports the addition of Dolly Varden rearing and present to AWC Stream #106-44-10120. There is a notched log weir about 10 feet downstream backwatering the reach immediately downstream of the outlet, but a large drop and scour pool has developed below the log weir. Nice habitat downstream and numerous young of the year in pools and riffles both upstream and downstream. Culvert has multiple streams entering upstream. Left hand stream appears to be main flow with right hand stream looking mostly like a ditch drain.
