ref nom # 15-584

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:
 This nomination corrects the hydrography of the East Fork of Pat Creek on Wrangell Island. The lower reaches of the East Fork of Pat Creek flow across a long, narrow alluvial area. The area is densely braided with numerous avulsion channels. On 28 August 2014, the East Fork channel was located as indicted on the attached map. Eight (8) spawning sockeye salmon were observed in this channel on 28 August 2014 (separate nomination).
