OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:
 Need to shorten this stream in order to correct Stream No. 191-20-13700 that is in the 2015 update. Could not show the full extent of 191-20-13700 due to 191-20-13600-2046 stream arc being in the way. We did not investigate 191-20-13600-2046 enough to see if stream could be delisted. Coordinates (Lat,Long): Upper(59.9820,-141.694) Lower(59.9740,-141.694)

CORRECTION

Water body name:

Survey date: 7/9/2014

Water body number: 191-20-13600-2046

Species & Lifestage: COsr

Watershed: White River-Frontal Gulf of Alaska

MTR: C022S022E **Quad:** Icy Bay D-2

Findings: Further investigation is needed to see if this stream still exists or has become seasonal. After two different visits water was not observed in this stream. If stream still exists it would connect with the new braid of the Big River that was thoroughly investigated.

Recommendations: Shorten the existing stream arc to reflect more likely stream arc in the Anadromous Waters Catalog.
