Name of Waterbody (if known): Freshwater

Location:

Anadromous Waters Catalog Volume and Number 112-50-10300

USGS 1:63,360 Quadrangle Sitka D4

or 1:250,000 (if 1:63,360 not available) _____

Species	Date(s) Observed	Stage(s) (Spawning, Rearing, Migration)
Coho	Sept 81	Spawn & Rearing
DV CT	1982	Rearing catchables in Lak

Comments: Please provide any clarifying information in addition to identification on Anadromous Waters Catalog Public Review Maps.

Barrier to all salmon is further downstream on North Fork. Coho, DV, CT get up South Fork to small (30-40 acre) lake

Name of Observer (please print) R. Douglas Perkinson

Date: 10/22/82

Sitka D-4

Got a little sloppy. Dolly and Cutthroat fry were rearing in lake (1982), and Coho fry were found in five tributaries.

All five tributaries are springfed, with bedrock barriers that are more or less ~~than~~ the downhill boundary of a clearcut. Not on present topo maps. Not sure if trout or char are using this addition for spawning
