Name of Waterbody (if known): Wolverine Creek

Location:

Anadromous Waters Catalog Volume and Number _____

USGS 1:63,360 Quadrangle Taku River A-5

or 1:250,000 (if 1:63,360 not available) _____

Species	Date(s) Observed	Stage(s) (Spawning, Rearing, Migration)
Coho	Oct-Nov 81+82	Spawning (Migration)

Comments: Please provide any clarifying information. Also, please include a map of the area identifying the stream reach. This can be a copy of the map from the Anadromous Waters Atlas.

I have observed up to 50 coho in this stream. They typically are holding in a large pool, although I have not observed active spawning, redds are in evidence. This area is frequented by bears which quickly catch salmon exposed on spawning areas. Fry probably rear in warm water ponds adjacent to Speel R.

Name of Observer (please print) Ron Josephson
