Name of Waterbody (if known): _____

Location:

Anadromous Waters Catalog Volume and Number S.E. AK 101-70-90

USGS 1:63,360 Quadrangle ~~Craig~~ Ketchikan C-6

or 1:250,000 (if 1:63,360 not available) _____

Species	Date(s) Observed	Stage(s) (Spawning, Rearing, Migration)
	7/29/84	
shorten ~~lake~~ stream # ~~6~~ 101-96-~~1088~~ 10890		

Comments: Please provide any clarifying information. Also, please include a map of the area identifying the stream reach. This can be a copy of the map from the Anadromous Waters Atlas.

Two falls are present within 50 m. of the ITZ. The first falls at (6 m, high, with 30% gradient) the immediate edge of the ITZ is a barrier to all species except perhaps a dedicated coho ~~salmon~~ at high tide. The second falls 50 m. beyond the first however is a definite 5 meter barrier. It would appear that the stream has little anadromous potential. The survey was done at high tide so any ITZ ASA could not be examined. Only a trace of ASA was between the two falls, IF a coho did negotiate the first falls.

Drafted Jew 10/84

Name of Observer (please print) Craig Burns

Date: 9/17/84 Signature: Donald G. Kelly ALCC HABITAT BIO.
