OTHER INDICATORS _____

RECOMMENDED MANAGEMENT No units across stream below the fork.
DF and yard away —
upper end needs DF, X out.

GENERAL NOTES

FISH SPECIES, ENHANCEMENT, BARRIERS, WATER LEVEL, STREAMBANK, VEGETATION, HABITAT QUALITY, RELATIVE ANIMAL USAGE (LOW, MED, HIGH), SPECIES.

Log Jam at 100' + is probably a barrier to pink & chum, maybe coho. NO spawning fish above. very few fry. looks like a great steelhead stream with lots of small pool behind boulders & small patches of spawning gravel
No falls up to 300yds and probably habitat above.
Rehab potential: work on log jam - 2 people 1 day.
install 3 gravel catchments in lower section to improve spawning. LOTS of water available
