RECOMMENDATIONS:

All riparian report. Use to be 2nd
fish flume survey for this unit See Mater's general
final of 1978 report for earlier data

Stream #2

Stream #2 is a tributary of the Bucktail and flows northerly, parallel to the East boundary of unit 45-25. This stream originates from a flat and is characteristically clear, moving and organic.

This stream is 1-3 feet wide, 6-12 inch deep with 12-24 inch pools. The substrate is primarily organic with sand. The gradient is 1.3%.

Stream #2 was previously surveyed and flagged blue/white. This was verified and the flagging readdressed. The stream was divided at the end of the habitat, plots flagged and tagged. This stream provides excellent coho rearing habitat for approximately 1,500 feet.

Recommendations

1) Directional felling only if necessary
2) No broadcast burning
3) No landing construction in the stream
