Comments: Provide any clarifying information, including number of fish observed, location of fish survey data, etc.

3 traps set 30mins. caught 1 co. Coho fry were abundant near the mouth and in side pools. This creek is probably spring fed as evidenced by cold water temperature and clear water. The substrate is good size for spawning but this survey was done too early to see adult salmon.

Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls. Attach a copy of the fish survey data, if available.
