Drafted Date

Species	Date(s) Observed	Spawning	Rearing	Migration
Coho	7/22/86	Suitable substrate available	X	

Comments: Provide any clarifying information, including number of fish observed, location of fish survey data, etc.

Good spawning substrate and rearing habitat are available in this small stream. Rearing Coho were commonly observed during the survey. Trout up to six inches in length were also observed. Coho use may well extend beyond the sample point as there were no indications of any barriers observed.

Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls. Attach a copy of the fish survey data, if available.
