Coho	11-10-88	✓		

Comments: Provide any clarifying information, including number of fish observed, location of fish survey data, etc.

This creek was walked from the headwaters of the two streams down about 1½ miles on 11-3. Sockeye were spawning along both forks. Total sockeye counted = 304. On 11-10 the rest of the stream was walked to determine where it drained. Sockeye were observed along the length of the stream but no count was taken. Two coho were observed spawning at this time.

Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls. Attach a copy of the fish survey data, if available.

This stream serves as a flood channel for the Tsirku River in the summer. One fry trap set 3½ hrs on 11-3 captured 6 coho and 1 dolly varden. Two adults were actively spawning on a subsequent trip on 11-10

Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls. Attach a copy of the fish survey data, if available.

SUBJECT: 1989 Anadromous Stream Map Revisions

Enclosed you will find Anadromous Stream Catalog Maps; Skagway B-4 & C-3. The two streams I have highlighted should be corrected as shown. I also noted that on the list of corrections that three streams had different numbers than those listed on the atlas. I have enclosed a copy of the correction list with the questioned numbers highlighted.

There were two streams which I nominated which did not make it on the atlas. I realize these were submitted late (the streams were not documented until November). Would it be possible to include these at this time? I have enclosed copies of the nominations and a copy of the map with streams drawn in for your information.

Thank you for your cooperation. I appreciate the work you have done. Could you please include me on your distribution list?
