OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Migration	Anadromous
coho salmon			X		Yes

Provide any clarifying information, including number of fish observed, location of fish survey data, etc. Attach a copy of the fish survey data, if available. Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls.

Comments:

Fry observed by Klukwan Forest Products, Inc.'s Al Hunter; see attached field notes.

MEMORANDUM OF TRANSMITTAL

TO: Jim Durst

ADDRESS:

FAX NO.: 755-2440

FROM: Ellis Worthylake

DATE: 6/26/92

NUMBER OF PAGES (INCLUDING THIS PAGE) One

If you do not receive all pages or experience any problems in the transmittal, please call Ellis at the above number.

Hello Jim!

Well, we found a surprise on the 100 Rd system at approximate sta. 32+00; a little tributary to N. Fork Salt Lg Cr. That appears to have two types of fish. A/ Hunter believes There one coho; I saw fish Today with dark spots on light background, coho right?

Any way Jim this was certainly overlooked. It is in a muskeg and if you didn't step into it you wouldn't. Know it was There. This is 2000'± ~~from~~ east of the bridge Xing.

We have already cut the R/W Through This area; no Timber to speak of. The road subgrade should be to this creek on July 8th±. We would like to go ahead and put puncheon down on either side of the creek and continue the subgrading then when the surfacing gets There, put The ~~36"~~ 30" x 30±' Culvert in and continue on. I really can not see where we would disturb The area except when we have to make a straight lay for the culvert.

Please call me at The office on 6/27 between 6:30 to 12 or at home This evening or Sat-Sun. Ph. 225-7044- Thanks Ellis

06-26-92 FRI 15:51 P.01

22 July (cont.)

100 Road crossing:

stopped at culvert at 32+00; stream 1-2' wide in 2'-3' deep slot through muskeg; organic bottom; good flow; culvert installation OK, but could have been bedded deeper; should pass fish;

stopped at culvert at 35+50; low flow; culvert less than expected; looks marginal for fish pass if needed

drove to fork at 250 spur & left track; walked to a bit beyond, mostly to end of 100 Road; at 240 short left trail & downhill to Salmon River. Some falls; gravel & trap; some bouldery, boggy & disturbed; RFP's 5/14/92 flagging, mostly up small

22 July (cont.)

trib from N to river end of rd. flow, above RFP says upper end anad; dace; CO fry seen in pools, but trapped some anyway;

trib: upper end OHW 2'-5' wide, 1' x ; flow presently ~ ½ of OHW; gravel, 30 chains W of E power line; 3% - 10%; silty bottom

trib: 10 CO, 3 DV (RFP had >50 CO above this) CO seen in pools

near mouth, high water channel from Salmon R. trib 5'-10' at mouth; looks good Type 3 fish trib & Salmon R. at mouth
