OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Migration	Anadromous
Coho	8/15/92		X		X

Provide any clarifying information, including number of fish observed, location of fi survey data, etc. Attach a copy of the fish survey data, if available. Attach a copy o map showing location of mouth and upper points of each species, specific stream reacl identified for spawning or rearing, locations of barriers, such as falls.

Comments:

DAVE HARDY AND I conducted stream surveys along the White River in August. These were foot surveys of streams to identify the extent of fish habitat. These streams as shown on the map are clear-water tributaries of the White River. Correct #3011 to show the stream's correct location. Coho fry found to the base of Brower Ridge (Sec. 22; NE¼ of the SE¼). The tributary located in the NW¼ of the NW¼ Sec. 26 splits with one fork heading northward into beaver ponds and provides extensive coho rearing. Coho adults were found in this tributary last year.
