OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Migration	Anadromous
	6/30/93				

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as any other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Two barriers were located at the sites indicated on the map. The first was 5' and 15' vertical falls. The second was a 30' drop in a gorge. Shocking upstream failed to capture any coho. Due to the location of the falls in the gorge it is unlikely that this system will ever be laddered.

Name of Observer (please print) James P. Cariello
