OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Migration	Anadromous
Coho	6/29/93		3		
Coho	6/29/93 (Trib.)		2		

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as any other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: 3 rearing coho were shocked at the upper end of the mainstem and 2 coho were shocked in two locations on the small tributary indicated on the map. Excellent spawning gravel was present at the upper end of the mainstem. There were two small bedrock falls which would probably be a barrier to pinks. Stopped shocking when confirmed coho.

Name of Observer (please print) James P. Caviello
