OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Migration	Anadromous
<u>Coho</u>	<u>8/9/95</u>		<u>X</u>		

**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as any other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: A fish ladder was constructed on Slippery Creek in 1988. I began electroshocking the headwaters of the three major tributaries and stopped shocking when I began getting coho. I continued downstream and visually observed many rearing coho, even in areas lacking large woody debris. Overall, coho juveniles were well distributed throughout the three major tributaries indicated on the map.

Name of Observer (please print) James P. Carriello ALASKA DEPT. OF FISH & GAME

Date: 10/26/95 Signature: James P. Carriello NOV 2 1995

Address: Box 667 Petersburg, AK 99833 REGION II HABITAT AND RESTORATION DIVISION

This certifies that in my best professional judgement and belief the above information is evidence that this waterbody should be included in or deleted from the Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes per AS 16.05.870.
