OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Coho Salmon	8/2/96		96		<input checked="" type="checkbox"/>
Dolly Varden	8/2/96		1		<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: At 1110 on 8/2/96 I set three baited minnow traps in the Gustavus Road ditch above the Glacier Bay National Park road crossing; this is the beginning of this constructed drainage. After a 40 minute soak; 6 cohos and 1 Dolly Varden were captured. At 1230 on the same day I set two baited minnow traps approximately 100 yards downstream of the Park road; after a 75 minute soak 91 coho were captured. This ditch is extremely good rearing habitat through most of its length.
