OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Coho Salmon	7/31 - 8/1/97		1		<input checked="" type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Three baited minnow traps were set less than 100 yards above the high tide line at 1500 on 7/31/97. This unnamed stream has a steep gradient, is less than two feet wide, and has a predominate cobble substrate. There appears to be minimal, if any, spawning habitat and the rearing habitat is also limited. This stream comes out of the ground a short distance above where the traps were set. The traps were pulled about 1230 on 8/1/97, 1 coho was captured.

Name of Observer (please print) Larry Derby -- Fisheries Technician
 Date: 11/5/97 Signature: [Signature]
 Address: ADF&G Commercial Fisheries and Development Division
Box 240020 Douglas 99824

This certifies that in my best professional judgment and belief the above information is evidence that this waterbody should be included in or deleted from the Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes per AS 16.05.870.

Signature of Area Biologist: [Signature]
