OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Coho	6/12/98	10+	200+		☑
Dolly Varden char	6/12/98		20+		☐
Chinook salmon		1			☑
Steelhead			1		☑
					☐

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: WEST FORK#3 - TSIVAT RIVER: In Section 25, T.20 S., R.14E this trib joins the mainstem, flowing in from the north. It branches in the upper north area of the section with the west trib ending in Section 14 and the east trib ending in Section 3. The area was surveyed and videotaped by a low level helicopter flight. The helicopter survey was used to determine the upper extent of habitat by locating flowing and connected water without any barriers to fish movement. Coho fry, DV juveniles and a steelhead juvenile were captured, identified, and released using baited minnow traps and/or minnow nets. Many pairs of adult coho jaw bones, gill plates, fins, and vertebrae were found on the stream banks during ground surveys. The fresh chinook jaws were located in the east trib in the upper portion of Section 14.

Subject: Icy Bay & Bering Glacier area Stream noms
Entry Type: Phone call
Contact: Philip W Mooney

Start: Mon 12/6/99 3:45 PM
End: Mon 12/6/99 4:00 PM
Duration: 15 minutes

Set down with helicopter at upper most point of water or percieved upper extent then walked downstream dipping, trapping and visually identifing fish. All were positively I.D.'d. Very confident that fish there.
