OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Coho	6/11/98	3	100+		☑
Dolly Varden	6/11/98		5		☐
Cutthroat	6/11/98		1		☐
					☐
					☐

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: This tributary off the # 3018 stream was surveyed and videotaped by a low level helicopter flight. The helicopter survey was used to determine the upper extent of habitat by locating flowing and connected water without any barriers to fish movement. A cross-over water connection exists between this stream and the #3014 tributary (located in Section 6). Coho fry, Dolly Varden char, and cutthroat were captured, identified, and released using baited minnow traps and/or minnow nets. Several pairs of adult coho jaw bones, gill plates, fins, and vertebrae were found on the stream banks during ground surveys. The upper extent was located in Section 13, Township 20 South, Range 13 East.

Name of Observer (please print): Phil Mooney

Date: 8/13/98

Signature: Phil Mooney

Address: 304 Lake St. Rm. 103
Sitka, AK 99835

This certifies that in my best professional judgment and belief the above information is evidence that this waterbody should be included in or deleted from the Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes per AS 16.05.870.

Signature of Area Biologist: Phil Mooney

Entry Type: Phone call
Contact: Philip W Mooney

Start: Mon 12/6/99 3:45 PM
End: Mon 12/6/99 4:00 PM
Duration: 15 minutes

Set down with helicopter at upper most point of water or percieved upper extent then walked downstream dipping, trapping and visually identifing fish. All were positively I.D.'d. Very confident that fish there.
