OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Coho	6/10/98	2	60+		<input checked="" type="checkbox"/>
Stickleback				100+	<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: CORRECTION: The outlet on the USGS Quad is incorrect. The outlet to the Tashalich River has moved approximately 1/2 - 3/4 mile to the west. It now enters the ocean at Section 28, Township 21 South, Range 10 East. An aerial survey was conducted and videotaped from a low level helicopter flight. Ground surveys included baited minnow traps (set for approx. 15 min.) and the use of minnow nets. Coho and stickleback were trapped, identified and released.

Name of Observer (please print) | Linda Speerstra-Perkins
 Date: | 8/11/98 | Signature: | *Linda Speerstra-Perkins*
 Address: | 304 lake St. Rm. 103
 | Sitka, AK 99835

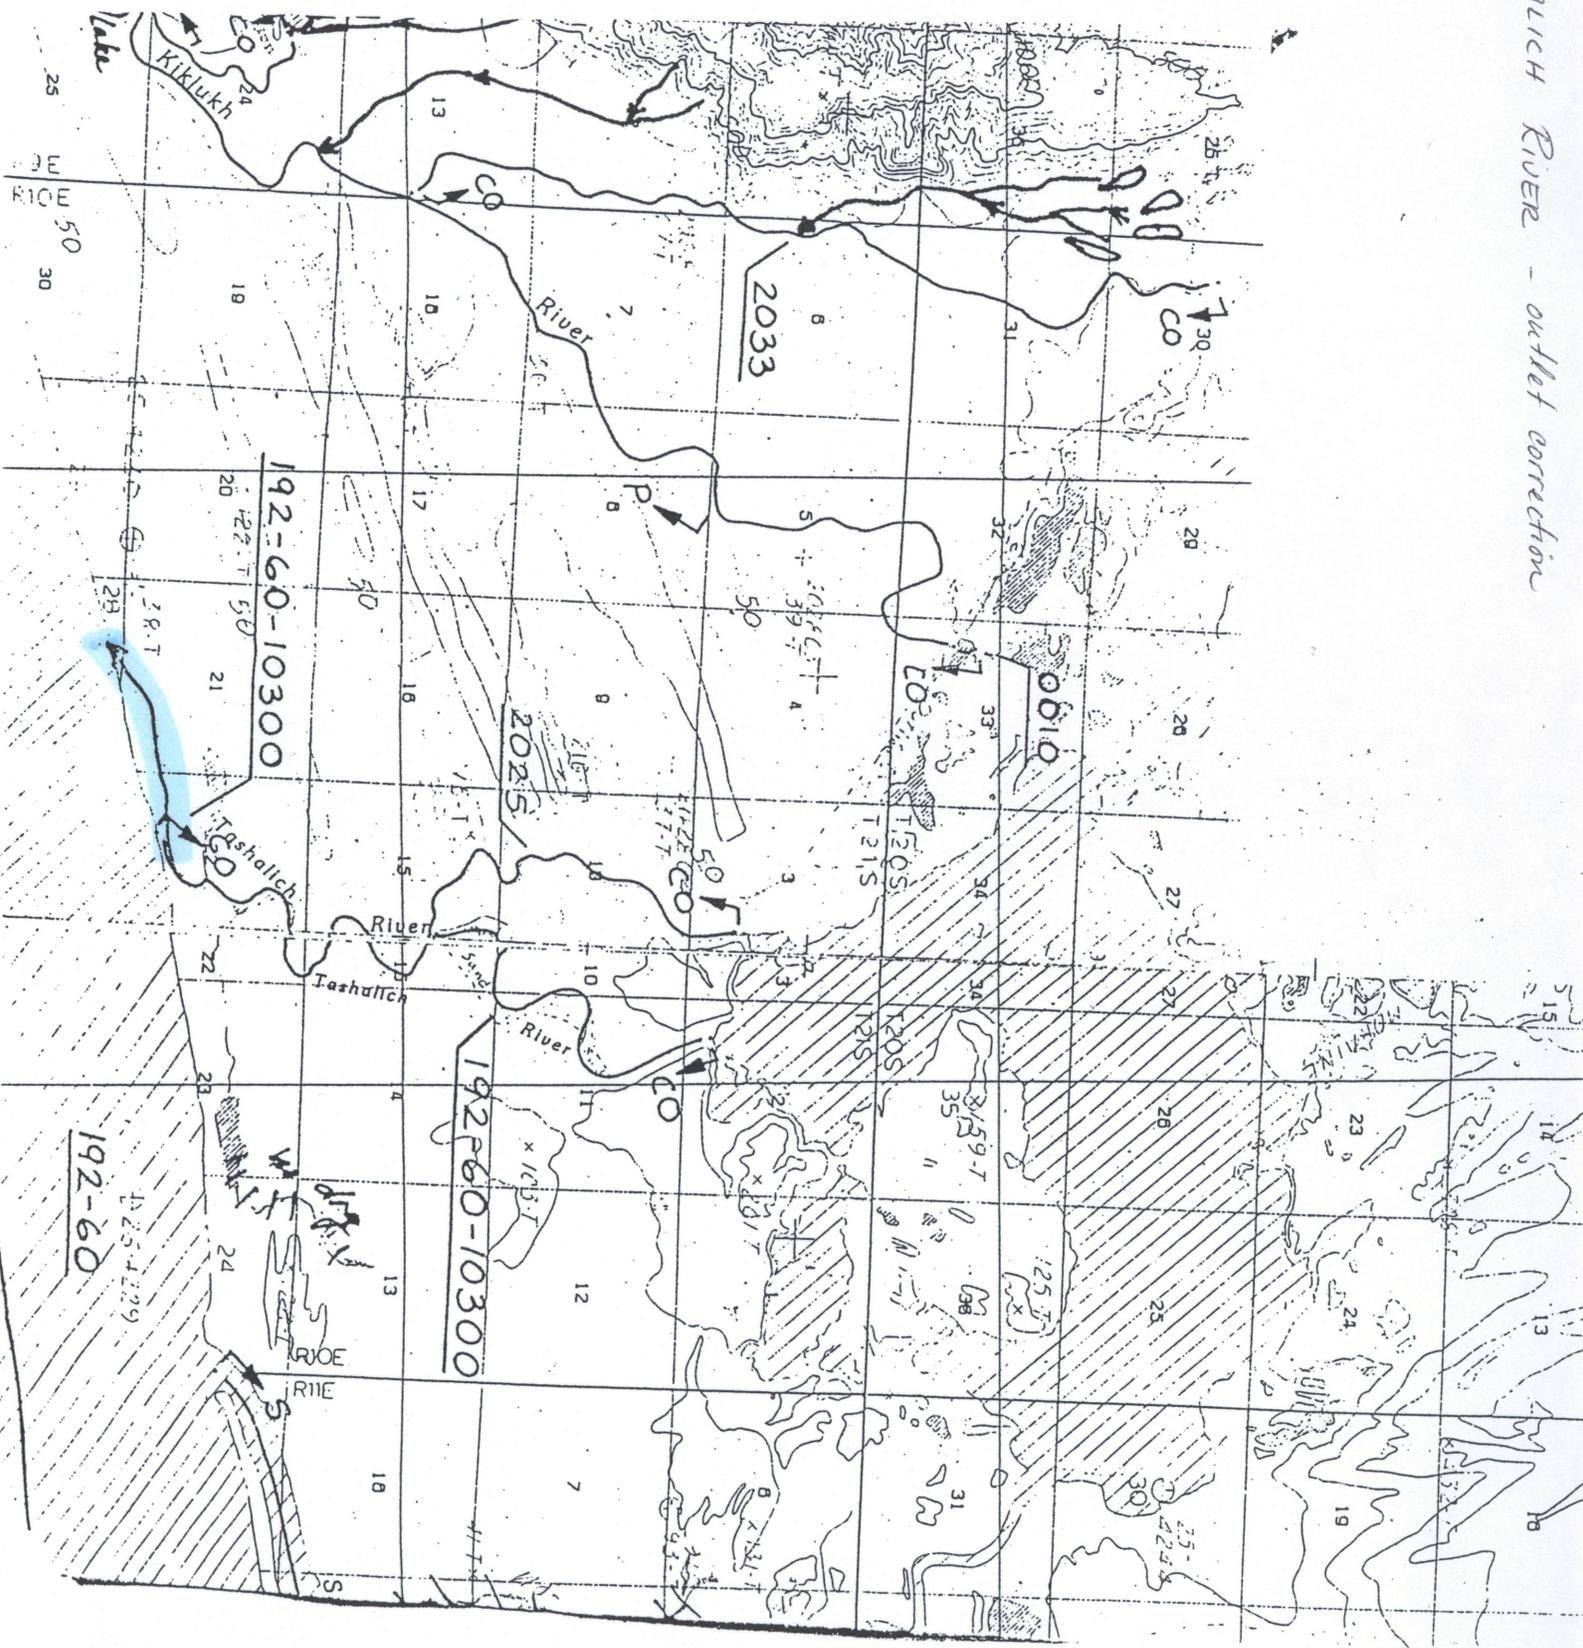

This certifies that in my best professional judgment and belief the above information is evidence that this waterbody should be included in or deleted from the Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes per AS 16.05.870.

Signature of Area Biologist: | *Paul Mooney*

Start: Mon 12/6/99 3:45 PM
End: Mon 12/6/99 4:00 PM
Duration: 15 minutes

Set down with helicopter at upper most point of water or perceived upper extent then walked downstream dipping, trapping and visually identifying fish. All were positively I.D.'d. Very confident that fish there.
