OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Coho	6/9/98			10	<input checked="" type="checkbox"/>
Dolly Varden	6/9/98		1		<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

**Comments:** The lake sits on the east side of the mainstem in Sections 25 and 26, Township 21 South, Range 9 East. An aerial survey was done by helicopter to reach side tributaries of the Kikluhk River. Ground surveys used baited minnow traps (set for 20 minutes) in the outlet of the lake and minnow nets in the outlet stream between the lake and the mainstem. Coho and Dolly Varden juveniles were captured, identified and released.

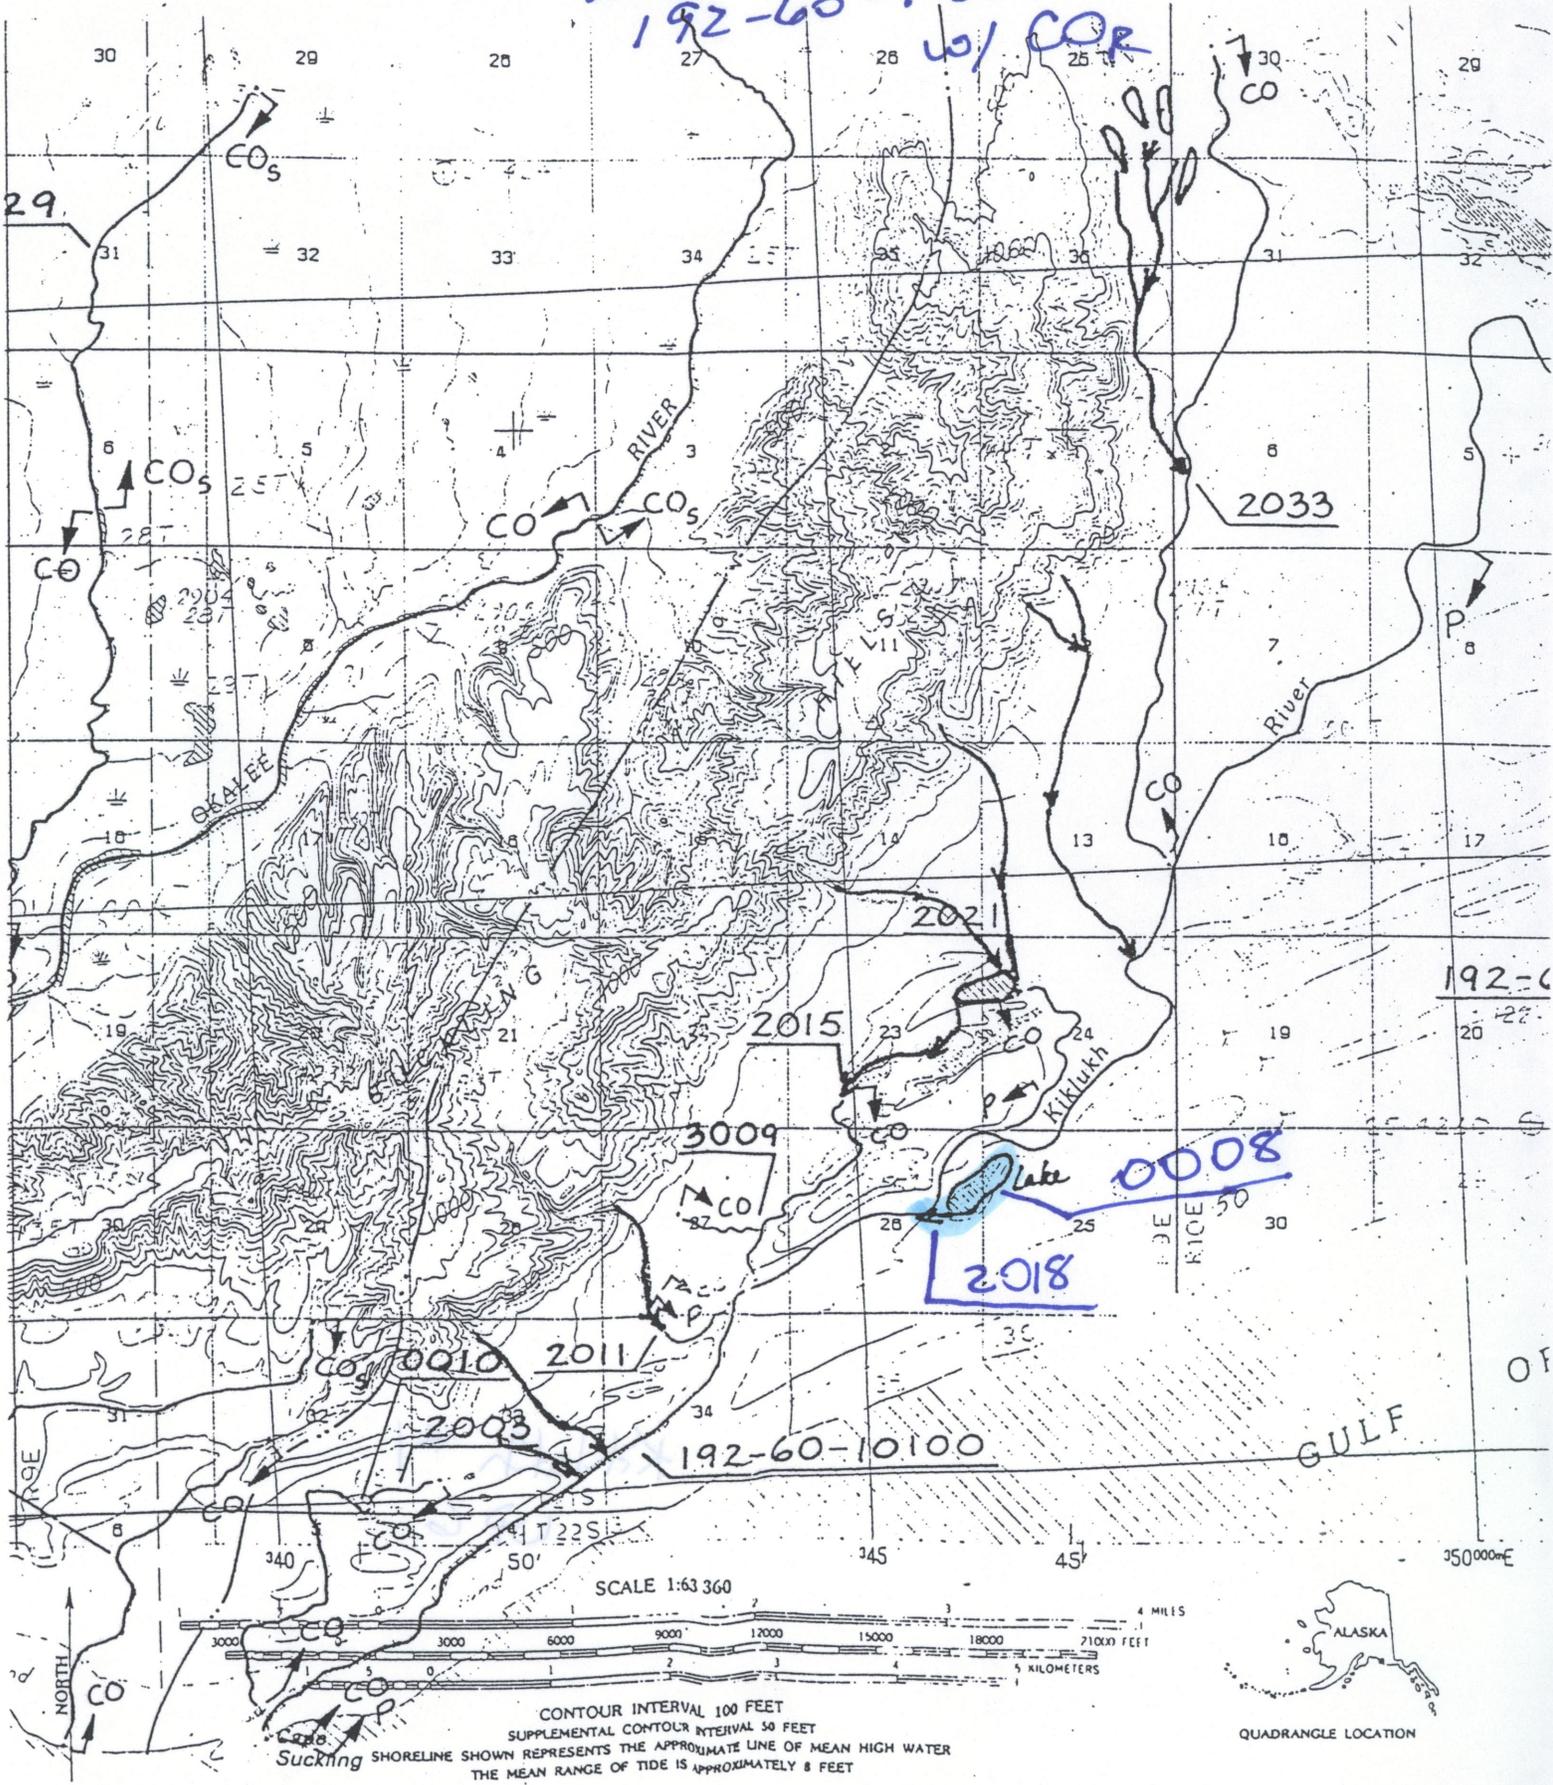

Name of Observer (please print) Linda Speerstra-Perkins  
Date: 8/14/98 Signature: Linda Speerstra Perkins  
Address: 304 Lake St. Rm. 103  
Sitka, AK 99835

This certifies that in my best professional judgment and belief the above information is evidence that this waterbody should be included in or deleted from the Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes per AS 16.05.870.

Signature of Area Biologist: Phil Prouney

**End:** Mon 12/6/99 4:00 PM  
**Duration:** 15 minutes

Set down with helicopter at upper most point of water or perceived upper extent then walked downstream dipping, trapping and visually identifying fish. All were positively I.D.'d. Very confident that fish there.
