Coho	6/9/98		3		<input checked="" type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: UPPER EXTENT INFORMATION. This upper trib of the Kikluh River originates in Section 33, Township 20 South, Range 10 East near a series of lakes. Aerial survey and videotaping was done by helicopter. Baited minnow traps (set for approximately 30 minutes) and minnow nets were used in stream sampling work. Coho fry were captured, identified, and released. Although we sampled above the lake to another interconnected small lake (approximately 200 feet north), water temperatures were higher and no fish were found.

Name of Observer (please print) Linda Speerstra-Perkins

Date: 8/10/98 Signature: [Signature]

Address: 304 lake St. Rm. 103

Sitka, AK 99835

This certifies that in my best professional judgment and belief the above information is evidence that this waterbody should be included in or deleted from the Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes per AS 16.05.870.

Signature of Area Biologist: [Signature]
