					<input type="checkbox"/>

**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

**Comments:** This nomination (6.78mp) is a tributary of the Yahtse River (10100). During our field trip in June we verified coho and Dolly Varden upstream of the bridge on the 1000 mainline road. The gradient at this location is relatively flat. Upper extent of fish habitat could not be determined at this time due to time restraints. A GPS way point was taken at the bridge location: N.59 54.497, W.141 14.915.
