**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

**Comments:** This nomination (10.68mp) is a tributary of the Yahtse River (10100). During our field trip in June we verified Adult coho remains and rearing coho. The gradient at this location began to pitch up. The upstream extent of fish habitat was not determined due to time constraints. A GPS way point was taken at the upper most northern survey point just out of Section 32: N.59 53.068, W.141 10.104.
