OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Coho salmon	April 24 - May 2, 1999		X		<input checked="" type="checkbox"/>
Dolly Varden	April 24 - May 2, 1999		X		<input checked="" type="checkbox"/>
cutthroat trout	April 24 - May 2, 1999		X		<input checked="" type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: During the spring of 1999, Division of Sport Fish funded a coded wire tagging (cwt) project for coho and chinook salmon smolt in the Chilkat River drainage. As part of this project, we trapped tributaries of the Chilkat River from Yindastuki (Haines airport) to 8 mile of the Haines Highway. The second most productive stream was named Schabel Creek. Between April 24 and May 2, 1999 we captured approximately 2,400 coho fry and smolt (and uncounted cutthroat trout and Dolly Varden) with an average CPUE of 7.3 coho/trap/day out of this stream and over 500 from this tributary. This stream was incorrectly identified on the atlas as part of Waterfall Creek 115-32-10252-2008. The stream previously identified as Waterfall Creek is actually three distinct tributaries (see attached map).
