OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Coho	11/13/2002	X			<input checked="" type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: During field inspections of the Pasagshak Road on November 13, 2002 spawning coho salmon were noted in this roadside pond. The stream originates from springs and upwelling ground water at the base of the adjacent hills and forms a pond above the road. Coho salmon were milling and spawning in the ponded area above the road. See attached photos. Wayne Dolezal also noted that he has observed andromous Dolly Varden in this area also, although he had no specific dates or observations documented. Add stream for coho spawning and add coho presence to Kalsin River.
