					☐

ALASKA DEPT. OF FISH & GAME MAR 3 - 2003 REGION II HABITAT AND RESTORATION DIVISION

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: nominated waterway is an uncatalogued, continuously flowing creek (approximately 1/4 mile in length) draining into the Buskin Lake on its western shore, to the south of catalogued stream #2020. GPS coordinates (1927 datum) geographically describing the location of the stream from its mouth to the extent surveyed are as follows: stream mouth N57° 46.781′ W152° 33.738′; survey terminus N57° 46.725′ W152° 33.771′. See attached figure for geographic illustration of approximate stream location.

Name of Observer (please print): Donn Tracy

Signature: Donn A. Tracy Date: 9/6/02

Address: Alaska Department of Fish and Game

211 Mission Rd. Kodiak, AK 99615

This certifies that in my best professional judgment and belief the above information is evidence that this waterbody should be included in or deleted from the Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes per AS 16.05.870.

Signature of Area Biologist: Ken Shivway

Revision 3/97

Figure 1. Buskin Lake drainage (USGS Kodiak D-2) showing location of tributary waterway nominated for addition to the Catalogue of Waters Important to Anadromous Fishes.

Subject: Re: AWC nominations

Hi Jay;

Good to hear from a fellow Dutch Harbor parolee - I didn't know that you had left Cordova. Sounds like an interesting position that you now have - my biggest concern about the governor's initiative is over what's going to happen with the AWC in terms of continued updates of the catalogue. I certainly hope that the department maintains that responsibility, and think the argument is valid from a legal standpoint.

The anadromous fish captured during surveys of the nominated Buskin drainage were ID'ed by myself. The juvenile fish were captured using baited minnow traps and although I didn't actually record the catch numbers, in general there were probably around 6 coho per set and at least 12 DV. No counts on adult sockeye salmon, either, but during a typical year each of the tribs mentioned are probably utilized by 200-500 fish each. Adult coho spawn in all the nominated tribs - I didn't see any during the surveys due to the timing. A portion of the old dike remains but there are flowing waters above as well as below it.

Best of luck with the transition - I think it'll be a real tragedy for the state's fisheries unless at least qualified and experienced ADF&G staff remain with the AWC program.

take care - donnt

Greetings Donn
In case you haven't heard I've left Cordova
I'm the new AWC PB so I have some ? for you and your cohorts re:your nominations of three streams on the west side of the lake
First thing I need is some survey data re:the coho mentioned on the nomination form
Did you or someone you know actually catch fish and ID them?
If so, how many, how were were captured, and when?
Also I was wondering if the southern most stream really extends thru that old road/dike
at the end of the lake.
Wayne Dolezal remembers there being a dike near the end of the lake
but he thought all creeks/trib ended at the dike
Has something changed?
Also Wayne remembers seeing sockeye spawning in those tribs too.
We are working to get all nominations in hand into the Atlas & Catalog
Still don't know what fate of AWC program will be
Push is to keep program as intact as possible at F&G
Hopefully I get to stay too, but so no one has come forward to say who goes to DNR, stays w/dept, or gets laid off

Hi Jay;

Just heard that SF Division is getting the anadromous catalogue - I saw a large increment in the governor's FY04 SF budget for "habitat projects" - guess that was it. Have seen sockeye and coho in the trib creeks on numerous past occasions - just didn't see them on the occasion I conducted the surveys.

take care

dt
