Site Information Station: FSB0303A04 Date Observed: 8/8/2003 Legal Desc.: Sec 24, T. 11 S., R. 51 W., S.M. Latitude: Longitude: Datum:
Stream Depth (m) Width (m) Water Temp. (C): 12 (Transformed) 59.20330 -157.79869 NAD27
Parameters: OHW 0.52 5 Stream Stage: Medium
Wetted 0.32 5 Dominant Substrate: Gravel (Original) 59.20253 -157.80117 WGS84

Rosgen Channel Type: E4 Low gradient, meandering riffle/pool stream with low width/depth ratio and little deposition. Very efficient and stable. High meander width ratio.

Station Comments: Comparable habitat extends upstream almost to Station 03A05. The large tributary west of station (confluence in Section 7, 5.8 km SSE of station appears to provide comparable habitat. The first large stream east (confluence with Nushagak River in Section 33, T. 11 S., R. 50 W., S.M.) of the sampled stream appears to provide similar habitat and should be investigated.

Key to Samp. ID

Samp. ID: A Method: Portable Electrofisher Electrofisher Time(s): 520 Efficiency: Poor
Comments: Low conductivity and open escape lanes reduced electrofishing efficiency. Used seine twice to herd fish.

Additional Comments: The nominated waterbody flows directly to the Nushagak River (325-30-10100), in which spawning coho salmon are currently documented. The actual upstream limit of coho salmon distribution is likely near Station FSB0303A05.

Add new stream w/ coho salmon nearby. Coho salmon presence documented in Mainstem.
