**Site Information** Station: FSB0319A04 Date Observed: 8/24/2003 Legal Desc.: Sec 17, T. 5 S., R. 40 W., S.M. Latitude: Longitude: Datum:  
Stream Depth (m) Width (m) Water Temp. (C): 10.2 (Transformed) 59.74057 -156.13037 NAD27  
Parameters: OHW 0.4 6 Stream Stage: Medium  
Wetted 0.2 6 Dominant Substrate: Gravel (Original) 59.73984 -156.13286 WGS84

Rosgen Channel Type: C4 Low gradient, meandering, point-bar, riffle/pool, alluvial channels with broad, well-defined floodplains.

Station Comments: Upstream of one beaver dam. We conducted a rapid assessment of the fish community as Station 19A03 is upstream. The first large Stuyahok River tributary to the west (flowing through Township 5 S., Range 40 W., S.M.) appears to provide suitable salmonid habitat far upstream of the currently cataloged anadromous fish upper limit.

**Observation Information**

Life History: Anadromous	Species\Lifestage: coho salmon juvenile (suspected spawning)	Samp. ID (# Fish): A (21)	Barriers: Specific Barrier Unknown
Life History: Resident	Species\Lifestage: Arctic grayling juvenile	Samp. ID (# Fish): A (1)	Barriers: None
Life History: Unknown	Species\Lifestage: Dolly Varden juvenile	Samp. ID (# Fish): A (1)	Barriers: None
	Species\Lifestage: slimy sculpin juvenile/adult	Samp. ID (# Fish): A (1)	Barriers: None

**Key to Samp. ID**

Samp. ID: A Method: Portable Electrofisher Electrofisher Time(s): 138 Efficiency: Fair

**Additional Comments:** The nominated waterbody flows to the Stuyahok River (325-30-10100-2202-3044), in which spawning coho salmon are currently documented. Observed habitat and the small size and abundance of collected coho salmon strongly suggest cohos spawn in this area.
