OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
COHO	10/11/2004		1+		<input checked="" type="checkbox"/>
DOLLY VARDEN	10/11/2004		2+		<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

*Add new streams w/ COPACOP*

**Comments:** Rearing coho and Dolly Varden juveniles were visually observed in a clear backwater pool on this tributary to the Busking River. One coho juvenile and two Dolly Varden were dip netted for verification of species. Around 6 - 8 others were observed. Sampling was done in a small side tributary to the main tributary. This side tributary comes down along the road and in the upper reaches is in a roadside ditch. The main tributary has a perched 48 inch diameter culvert at the road crossing, the side tributary comes in just downstream of the crossing and fish were sampled about 75 feet upstream. Dolly Varden were also visually observed and one dipnetted from the mainstem upstream of the road crossing.

Several gill plates and other adult salmonid remnants were found along the banks of the mainstem downstream of the road crossing. A species confirmation could not be made from the pieces found however, it is suspected that they were either from adult spawning pink salmon or Dolly Varden. The vegetation along the banks was also heavily trampled by bears.

Scott Maclean (OHMP), also participated in captures, observations and species confirmations.

This certifies that in my best professional judgment and belief the above information is evidence that this waterbody should be included in or deleted from the Fish Distribution Database.
