OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Chum salmon					<input checked="" type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:

Remove chum salmon presence from existing stream, initial addition may have been due to misidentification  
Chum salmon presence and spawning cited on mylar last updated 1995, but no other info to document chum salmon in stream  
Escapements of chum salmon into Olga Creek have been insignificant since the weir program was started.  
Many years of zero counts for chum indicate straying from other systems rather than an established population.

Remove CH from 257-30-10040
