IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat, locations, types, and heights of any barriers; etc.

Comments:

During a Forest Practices inspection I used an electro-shocker to sample a reach of stream above number 252-31-10013, that flows into Saposa Bay. I used I used an electro-shocker to sample the stream, finding a juvenile coho about 60 mm long, a rainbow trout about 90 mm long, +/- 50 Dolly Varden and 10 sculpin. The geomorphology of the stream is a deeply incised forested channel consisting of bedrock and cobble substrate. Mr. Haag, Koncor Forest Products stated the U.S. Forest Service stocked rainbow trout in local lakes on Afognak Island during the 1960s.

Name of Observer (please print): Will Frost, Habitat Biologist
 Signature: [Signature] Date: 8/10/2010
 Agency: ADF&G, Division of Habitat
 Address: 333 Raspberry Road
Anchorage, AK 99518

This certifies that in my best professional judgment and belief the above information is evidence that this waterbody should be included in or deleted from the Anadromous Waters Catalog.
