J,
I think Mark is right. -5009 appears to flow into -5025, and the whole system drains to Eightmile Creek. In my opinion, the entire length of -5009 should be switched to drain into -5025, and the 2 streams should be joined into a single AWC stream. Zooming way in, -5009 does not appear to have a confluence with the Talachulitna at all, but it appears to be continuously connected to -5025.

Joe

Joe – received the following regarding a nom ya submitted in 2003. What do you think about rerouting the stream?

JJ

Hello,
247-41-10200-2053-3205-4053-5009 appears to flow into 247-41-10200-2053-3205-4009-5025. If you look at google earth, the beaver ponds show the water flowing the other way, at least for a majority of its length. I can't be sure exactly where it starts flowing to the Talachulitna River. Just a heads up

Example Beaver Pond
61.836117°
-151.322476°

Regards,

Mark Jessop
