Add new stream w/ coho salmon Re pmj

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:

During a Forest Practices inspection I used an electroshocker to sample an unnamed tributary to Portage Creek. I captured and released three juvenile coho salmon at Lat 58.256738, Long -152.484103, 15 Dolly Varden at Lat 58.257415, Long -152.485323 and one juvenile steelhead trout at Lat 58.256837, Long -152.484552. I located a barrier about 500 feet below the 710 Road at 58.257415, Long -152.485323 in the area of the Dolly Varden (Figures 1 and 2). I sampled above the barrier for about 300 feet. I captured and released about 25 Dolly Varden. The stream is about 20 feet wide and less than 3% slope.

Name of Observer (please print): Will Frost, Habitat Biologist
 Signature: [Signature]
 Agency: ADF&G, Division of Habitat
 Address: 333 Raspberry Road
Anchorage, AK 99518

Date: 7/5/2011

This certifies that in my best professional judgment and belief the above information is evidence that this waterbody should be included in or deleted from the Anadromous Waters Catalog.
