OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Steelhead Trout (2)	7/30/2014		X		<input checked="" type="checkbox"/>
Coho Salmon (1)	7/30/2014		X		<input checked="" type="checkbox"/>
Dolly Varden	7/30/2014			X	<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes, etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments

During an joint AKSSF stream survey, I captured juvenile steelhead trout and coho salmon in a stream above the 1100 Road. The stream flows to Stream No. 251-82-10050-2039 (Figure 1, IDENT 218). See the July 30-August 1, 2014 trip report.

only one coho salmon, Anadromy of steelhead trout unik

SUBJECT: AKSSF AWC Survey: Afognak Island
July 2014

On July 30 through August 1, 2014, I joined Sara Ashcroft, Alaska Department of Fish and Game (ADF&G) and Butch McGavran, Afognak Native Corporation (ANC) on Afognak Island for the purpose of sampling waters in the area of proposed harvest activities to document the presence of anadromous fish. The information gathered will be used to submit official nominations for inclusion in the Anadromous Waters Catalog and its companion Atlas. Inclusion in the Anadromous Waters Catalog will conserve salmon habitat by providing the 66-foot riparian retention area protection required under the Forest Resources and Practices Act (FRPA). A water body listed in the Anadromous Waters Catalog is also afforded additional protection under State law at AS 16.05.871. The weather conditions were clear and warm.

On the afternoon of July 30, Ms. Ashcroft and I drove the 1100 Road to mile post (MP) 7.5. We used an electrofisher to sample an unnamed stream that flows into Stream No. 251-82-10050-2039. The stream is located on land managed by ANC. We sampled above the 1100 Road about 160 meters to a beaver dam located on an unnamed lake (Figure 1). A perched culvert was recently removed from the stream on the 1100 Road and a log bridge was installed in the same location. We captured 2 juvenile steelhead trout (45 and 60 mm fork length (FL)) and 1 juvenile coho salmon (95 mm FL) (Figures 2 and 3). Additionally, we captured 9 Dolly Varden (55-125 mm FL). The unnamed stream above the 1100 Road will be nominated to the Anadromous Waters Catalog.

We drove the 1100 Road to MP 8.1. We sampled an unnamed stream that flows into Stream No. 251-82-10050-2039. The stream is located on land managed by ANC. We sampled above the 1100 Road about 100 meters (Figure 4). A perched culvert was recently removed from the stream on the 1100 Road and a log bridge was installed in the same location. We captured 3 juvenile coho salmon (55-60 mm FL) below the road and 2 juvenile coho salmon (65 and 70 mm FL) above the road. The unnamed stream above the 1100 Road will be nominated to the Anadromous Waters Catalog.

On the morning of July 31, Ms. Ashcroft, Mr. McGavran, and I drove the 1100 Road to MP 7.5 and walked about 1 kilometer to an unnamed lake located above the specified reach of Portage Creek (Stream No. 251-82-10050). We set one baited minnow trap below the lake outlet and

two minnow traps in the lake. The traps soaked about 4 hours. We captured two juvenile coho salmon (70 and 75 mm FL) and 30 stickleback in the lake. Beavers were constructing a dam at the outlet of the lake (Figure 5). The unnamed lake will be nominated to the Anadromous Waters Catalog.

We walked to an unnamed tributary to Stream No. 251-82-10050-2042-3006. We sampled about 1,000 meters of the stream. We stopped sampling below an 8-foot high barrier (Figure 6). Below the barrier we captured 10 juvenile coho salmon (50-90 mm FL) and 3 juvenile steelhead trout (75-90 mm FL) (Figures 7 and 8). Additionally, we captured 30 Dolly Varden. No length measurements were taken for the Dolly Varden. The unnamed tributary will be nominated to the Anadromous Waters Catalog to the barrier falls.

On the morning of August 1, we drove the 930 Road to an unnamed pond located above the specified reach of Stream No. 252-32-10010-2009 in the Little Afognak River watershed. The pond is located on land managed by Koncor. We set three baited minnow traps at the pond outlet (Figure 9). The traps soaked about 4 hours. The traps captured about 100 stickleback and 1 Dolly Varden (70 mm FL).

We drove to an unnamed lake on the 930 Road MP 8.5. The lake was sampled during the May 2013 sampling effort. No fish were captured in the lake during the May 2013 effort. We walked to the lake outlet and observed an abandoned beaver dam. We walked downstream below the dam and followed the stream channel about 753 meters to Stream No. 252-32-10010. In the first 125 meters below the lake, we observed algal growth on the stream bottom (Figure 10). No fish were observed. About 230 meters below the lake, the algal growth diminished and we set two baited minnow traps. The traps soaked about 1 hour. The traps captured 4 Dolly Varden (60-77 mm FL). We walked downstream an additional 400 meters and observed 5 juvenile coho salmon about 90 meters upstream of Stream No. 252-32-10010. The unnamed stream will be nominated to the Anadromous Waters Catalog.

We drove the 930 Road near MP 7.7. We sampled an unnamed stream that flows into Little Afognak Lake (Lake No. 252-32-10010-0020). The stream flows from an unnamed lake in Unit O-54 (Figure 11). The stream was sampled in 2012 and 2013. Dolly Varden were captured in the stream during the two previous sampling efforts. During our August 1, 2014 sampling effort we captured 3 juvenile coho salmon (55-66 mm FL) (Figure 12). The unnamed stream will be nominated to the Anadromous Waters Catalog.

The ADF&G is currently planning on returning to Afognak for a sampling effort in August 2014.
