IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:

During a fish habitat survey, I observed juvenile coho salmon in a tributary to Lake No. 259-21-10120-2006-3050-0010 (Figure 1, IDENT 396 and 397). Directly above the observed fish a 12-inch diameter wood culvert may be blocking fish passage. The culvert is located in an abandoned military road. Please add the new tributary to the AWC.

Add new stream w/ coho salmon rearing, add barrier upstream of upper extent
