IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:

During a fish habitat survey, I observed juvenile coho salmon above the specified reach of Stream No. 259-22-10026-2021 (Figures 1 and 2, IDENT 441). I used a GPS to map the correct stream location.

Extend stream w/ coho salmon rearing, update existing hydrography
