IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:

I used an electrofisher to capture juvenile coho salmon above the specified reach (Figure 1). Please add coho rearing above the specified reach and update the hydrography arc for the new stream reach. See the July 11, 2015 Trip Report.
