**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

**Comments:** Add new creek w/ Coho salmon REARING  
 During a joint KSWCD survey, we observed juvenile coho salmon and Dolly Varden trapped in pools above a failed Coast Guard culvert (IDENT 204) (Figure 1). The stream was dry below the culvert because of extreme dry weather conditions. During a foot survey in March 2015, fish bones were observed below the culvert along the stream
