OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Migration	Anadromous
Coho fry	7-20-92		+		+
Dolly varden	7-20-92		+		

Provide any clarifying information, including number of fish observed, location of fish survey data, etc. Attach a copy of the fish survey data, if available. Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls.

Comments:

Numerous coho found throughout most of this tributary. One meter in width, it flows slowly, meandering through grassy meadow. At the upper extent station we shocked 1 m^2 for 5 seconds capturing four coho fry and three Dolly Varden fry. Shocking above this station produced only Dolly Varden. Although not a complete barrier, the stream narrows to less than .2m wide by 6-12 in in depth, subterranean in places. See copy of final report for detailed narrative and map.
