OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Migration	Anadromous
Dolly Varden	6/28/96		XXX		

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as any other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: 6/28/96 - Minnow trap baited with cured salmon eggs, fished from 1425 hr. to 1720 hr. (2.9 hr. total); captured 8 DV @ 135, 125, 125, 120, 115, 115, 95, 95 mm. Trap set in pool of main channel about 50 feet upstream of road crossing. Stream is 24 to 36 inches wide with a substrate of sand and gravel. Stream flows in a small V-notch valley. Ground surveys indicated that accessible fish habitat extends at least 1,000 meters upstream of the road. Herbaceous vegetation overhangs much of the stream but pool habitat is sparse. Stream banks are not undercut to any degree.

The lower reaches of Reindeer Creek within 1,000 meters of its confluence with Thirty-Three Creek likely provides coho salmon rearing habitat, however, due to time constraints samples were not attempted in that area.

[note: length measurements, above, are tip of snout to fork of tail]

This certifies that in my best professional judgement and belief the above information is evidence that this waterbody should be included in or deleted from the Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes per AS 16.05.870.
