USGS Quad(s) Iditrood A-5

Fish Distribution Database Number of Waterway 335-20-16600-2671-3055

Name of Waterway Grouse CK  USGS Name  Local Name

Addition  Deletion  Correction  Backup Information

For Office Use

Nomination # <u>05-076</u>	<u>[Signature]</u>	<u>1/6/06</u>
Revision Year: <u>2007</u>	ADF&G Fisheries Scientist	Date
Revision to: Atlas _____ Catalog _____	<u>[Signature]</u>	<u>1/6/06</u>
Both <u>X</u>	ADNR OHMP Operations Mgr.	Date
Revision Code: <u>A-2</u>	<u>[Signature]</u>	<u>10/20/05</u>
	FDD Project Biologist	Date
	<u>[Signature]</u>	<u>6/11/06</u>
	Cartographer	Date

OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
<u>Coho Salmon</u>	<u>9-23-04</u>	<u>✓</u>			<input checked="" type="checkbox"/>
<u>(3)</u>					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

**Comments:**  
As part of a helicopter survey of Crooked Creek, Grouse Creek was overflowed. Although not part of the survey intent, Grouse CK was surveyed in its lower reach to determine if Coho were present. 3 were observed in this lower reach. Water Clarity was fair, but not clear. A full survey of Grouse Creek was not conducted.  
Add new stream w/ COP

**RE: Nomination form submittals**

Dear J.,

Here are the signed nomination forms for Dome and Grouse creeks. Let me know if you need anything else on it. The field season is winding down and I am finally in the office for the next week or two.

I also have included a nomination form for another creek we documented to have more than the two coho minimum on a survey I just got back from; Ophir Creek. This creek is the one just upstream of Dome and was blocked from salmon use last year due to a significant beaver damn just down stream of its mouth on Donlin. Long-term low flow conditions in 2004 made the beaver dam a significant barrier. This damn was breached and over-topped in 2005 due to high rains and resulting high discharges in the system in August and September. With the water being quite turbid and Ophir being at or even slightly above bankfull conditions, it was hard to see and we still found three. Therefore, I am comfortable nominating this creek too.

We found another coho in Snow Gulch, but only one and this water was extremely turbid so it was just dumb luck to see this coho surface.

Call or email ([efleming@OtterTail.us](mailto:efleming@OtterTail.us)) if you have any questions or need anything else. In case you are interested, we are currently preparing an aquatic resource technical report that will have detailed results of our 2004 and 2005 aquatic biomonitoring program (bugs, tissue metals, resident electrofishing, and the helicopter adult salmon survey).

Sincerely,

  
Ed Fleming  
Principal Aquatic Biologist
