IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments A total of 79 Chinook salmon juveniles were observed in the Black River. The nearest AWC nomination is downstream in the Oshetna River. 3 Chinook salmon juveniles were observed on 8/2/2013 by ADFG using a baited minnow trap. During AEA's sampling efforts, juvenile Chinook salmon were observed on 6/29/2013 (6), 7/18/2013 (16), 7/19/2013 (24), 7/20/2013 (2), 7/21/2013 (1), 8/8/2013 (2), 8/15/2013 (6), 8/16/2013 (9), 9/14/2013 (1), 9/15/2013 (7), and 9/16/2013 (2) using various methods including electrofishing, baited minnow traps, fyke nets, and visual observations. For additional information, see attached tables, map, and GIS shapefiles.

Name of Observer (please print): Nathan Anderson

Signature: _____ Date: 9/5/2014

Agency: Alaska Energy Authority

Address: 813 West Northern Lights Blvd.

Anchorage, AK, 99503

This certifies that in my best professional judgment and belief the above information is evidence that this waterbody should be included in or deleted from the Anadromous Waters Catalog.

Signature of Area Biologist: _____ Date: _____

Name of Area Biologist (please print):
