

A very good stream and should have good fishery potential. Some good rearing areas for coho throughout (good pools and side areas .)

Water flowing through debris and over logs - 4' drop and is a fish block.

Easy stream to walk - walk in the stream.

Tide 2/3 out and ebbing
Normal flow.
Sunny day.

Looked for fry in the pools and side areas but saw none. Good looking stream - one of the better ones in this area.

Spawning area for the entire stream = 60%

Continues steeply.

Steep - much slumpage and debris in stream. Stopped here, approx. 400 yds. above the top of the ITZ.

Log jam and probable barrier with water flowing thru debris.

Smaller channel - 3' wide and is blocked by debris (fish block).

Small tributary

Braided areas but good gravel throughout and generally each channel is 6' wide and 4"-6" deep with pools 2'-3' deep

12' wide: Top of I.T. = 100 yds. of good gravel but has some bedrock throughout. 50% spawning area.

16' wide
