SPECIES PRESENT

STAGE OF DEVELOPMENT

Cutthroat
Coho

11 fry (2-4") 5 adult (4-6")
2 fry (2 1/2")

TYPE OF FISH HABITAT

Salmon Rearing	Excellent	Good	Fair	Sq. Yds.	_____
Salmon Spawning	Excellent	Good	Fair	Sq. Yds.	_____
Resident Rearing	Excellent	Good	Fair	Sq. Yds.	_____
Resident Spawning	Excellent	Good	Fair	Sq. Yds.	_____

Is future fish habitat enhancement possible?
If so Describe:

YES _____ NO

Fish Present Above Road Crossing: _____
 Below Road Crossing: _____
 Within Unit Boundary: _____
 Below Unit Boundary: _____

YES	NO

STREAM TEMP.: N/A

Methods used to determine presence of fish:

Stream #	Date	#Fish	Species	Length	Gear	Time
1	8-10-82	5	Cutthroat	4-6"	Shocker	15 min
	"	6				
	"	1	Cutthroat	2-4"	"	
			Coho	2 1/2"	"	
2	8-10-82	0	-	-	"	
3	"	0	-	-	"	3 min
4	"	0	-	-	"	"
5	"	0	-	-	"	"
6	"	0	-	-	"	"
9	"	0	-	-	"	"
		5				
		1	Cutthroat	3-4"	"	"
			Coho	3 1/2"	"	15 min

Pertinent Wildlife Information: N/A

Comments: Stream #1 blue/white stops 150 ft below P-line where debris blocks stream. Flayed green/white from there to P-line

Recommendations:

Full fisheries protection should be required on streams 1, 7, 8. Strs 2, 3, 4, 5, 6 will require water quality protection

UNIT # 64 + 65

STREAM(S)# 1

The following fish stream protection prescriptions and recommendations apply:

TIMBER HARVEST

- 1. Directional falling or lining (to include jacking) of timber away from stream course.
- 2. Split the yarding or full suspension of timber over the stream course.
- 3. No limbing or bucking of timber inadvertently felled into stream course (to include windthrow). Yard timber tree length prior to bucking and/or limbing.
- 4. Forty-eight hour removal of any debris introduced into stream course during timber harvest.
- 5. Windthrow impacting stream course will be marked for "Leave" and "Take" timber.
 - a. timber marked with blue ribbon should be removed by yarding tree length from stream course if possible.
 - b. timber marked with yellow ribbon should be left in place or will require special considerations upon removal.
 - c. no bucking or limbing of timber occupying or suspended over stream course.
 - d. removal of all windthrow and logging debris from stream course concurrent with yarding (to include root wads that may enter stream course).
 - e. directional falling of standing timber away from stream course.
 - f. timing of timber harvest to avoid adverse impact to salmonid redds and/or pre-emergent fry. (Optimum time: approximately April 15 to August 15).
- 6. Hazard (leaning) trees along stream course should be marked by sale administrator and felled concurrent with yarding to prevent introduction into stream channel.
- 7. Protect brush and understory vegetation along stream course of temperature sensitive streams during timber harvest.

"Non-Sports" Resident Fish Habitat and Water Quality Protection - Including
V-notches and/or unstable soils
(Green/White Ribbon)

UNIT # 64-65

STREAM(S)# 2,3,4,5,6

ROAD # 2100

STATION # _____

The following fish stream protection prescriptions and recommendations apply:
based upon resistance of habitat to alteration and fish habitat management
unit objectives.

- 1.) Directional falling (to include lining and jacking if necessary) of timber away from stream course.
- 2.) Split the yarding on stream course or full suspension of timber over stream course.
- 3.) Removal of all introduced debris (to include root wads that may enter stream course) from stream course concurrent with yarding.
- 4.) Yard timber impacting stream course same season as felled.
- 5.) Windthrow impacting stream course will be marked for "leave" and "take" timber.
 - a.) Timber marked with blue ribbon should be removed with least possible disturbance to stream course.
 - b.) Timber marked with yellow ribbon should be left in place or will require special consideration upon removal.
- 6.) Chunk clean (removal of introduced debris 3 in. diameter or 6 ft. length or larger).
- 7.) Avoid yarding up or down protected stream courses.
- 8.) Recommend input from Soil Scientist and/or Hydrologist.
